Male:	136
Non-binary:	0
From country 1 Hungary:	349
From country 2 [name]:	
From country 3 [name]:	
...	
Total number of participants:	349
From total number of countries:	1
Description	
<i>Provide a short description of the event and its activities.</i>	
Skilled interviewers carried out structured, face-to-face interviews with 349 individuals residing permanently in Hungary. Each session lasted approximately 25	

to 30 minutes and focused on participants' attitudes toward climate change issues as well as their behaviors related to their carbon footprint.

These consultations were in one-on-one format with a planned time for the respondents to ask own questions.

Questions are divided into 10 sections and focused on sociodemographics, electoral behaviour, general attitudes towards the EU and society, climate attitudes, Green Deal attitudes and related knowledge, current behaviour and willingness to change that behaviour, housing, jobs and transport. All questions were coordinated across the Consortium and adapted to the specific country. This way thorough comparative analysis will be possible.

Consultations questions refer to the likelihood and impacts of future actions such as reducing waste in various ways, using public transport and other alternatives instead of a car/ flying. Also, questions are looking into the reasons that can prevent from investing in lowering the energy consumptions and asking for opinions on bans to use single-use plastics, charging deposits for bottles, banning cars from city centers. The interviews also focus on the conditions of buildings respondents live in, public transportation, active mobility, use of electric cars and governments incentives.

The questions asked by the respondents mainly refer to the cost and climate effects of the production of electric cars, disposal of electric cars' batteries, ways to reduce environmental impacts of fast fashion, etc. The policy team of the JustGreen project will provide publicly available answers on the project's website. Accordingly, the questions and answers shall be used in further writing of the policy analysis.

Furthermore, national studies and analysis of the data obtained via this citizens consultations shall be finalized on 15.12.2024, and comparative analysis of all countries shall follow. This way data analysis shall be used for policy analysis, organization of the events such as activities from WP6 Webinars Comparing Outputs from Consultations and Focus Groups, WP7 Roundtable for Journalists, WP9-11 Climate Assemblies, etc.
